### HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

Claim 3 (Currently Amended):

A method of integrating telephony function with security and guidance features on an Internet appliance comprising the steps of:

selecting a communication access number using a selection means, said communication access number operable to access a communication link via said Internet appliance;

alerting a user of said Internet appliance when an attempt is made to select said communication link via a dialing action of said Internet appliance using said communication access number;

receiving an authorization for said dialing action by said user of said Internet appliance; ~~and~~

using a security protocol for encrypting and decrypting information transmitted on said communication link in response to authorizing said dialing action for said communication link[. . .]; ~~and~~

using a built-in key escrow function to notify a trusted server of a current dynamic host configuration protocol (DHCP) assigned IP address along with a key indicating authenticity of transmission so that voice over IP services between devices and a web page server lookup may be performed in a DHCP environment without side-channel communication for call or web reference look-up.

Claim 14 (Currently Amended):

A system for integrating telephony function with security and guidance features on an Internet appliance (IA):

one or more personal identification means (PIM) input units coupled to a system bus in an ICA, said PIM input units operable to generate unique PIM signals;

a security protocol circuit operable to encrypt, decrypt, store and retrieve said PIM signals and device driver code;

a PIM verification circuit operable to receive said PIM signals and compare them to a secure predetermined PIM signals, said PIM verification circuit generating a verification signal;

one or more Modems coupled to a dialing action controller and to communication lines; said Modems operable to send and receive communication data; ~~and~~

a dialing action controller (DAC) coupled to said system bus and said Modems, said DAC operable to receive a dialing action request and to alert a user of said dialing action and to enable or disable said dialing action to said Modems in response to said verification signal and a user signal[.]]; ~~;~~

wherein said DAC uses a built-in key escrow function to notify a trusted server of a current dynamic host configuration protocol (DHCP) assigned IP address along with a key indicating authenticity of transmission so that voice over IP services between

devices and a web page server lookup may be performed in a DHCP environment without side-channel communication for call or web reference look-up.

said security processing unit further comprising:

one or more personal identification means (PIM) input units couple dto a system bus in an ICA, said PIM input units operable to generate unique PIM signals;

a security protocol circuit operable to encrypt, decrypt, store and retrieve said PIM signals and device driver code;

a PIM verification circuit, said PIM verification circuit operable to receive said PIM signals and compare them to secure predetermined PIM signals, said PIM verification circuit generating a verification signal;

one or more Modems coupled to a dialing action controller and to communication lines, said Modems operable to send and receive communication data;  
~~and~~

a dialing action controller (DAC) coupled to said system bus and said Modems, said DAC operable to receive a dialing action request and to alert a user of said dialing action and to enable or disable said dialing action to said Modems in response to said verification signal and a user signal[.]; and

wherein said DAC uses a built-in key escrow function to notify a trusted server of a current dynamic host configuration protocol (DHCP) assigned IP address along with a key indicating authenticity of transmission so that voice over IP services between devices and a web page server lookup may be performed in a DHCP environment without side-channel communication for call or web reference look-up.
